NOVEMBER 2012

Intisari

Indeks Pelopor (IP) yang memantau prestasi ekonomi ke hadapan menurun pada November berbanding Oktober 2012. IP merekodkan penurunan sebanyak 1.4% kepada 110.5 mata daripada 112.1 mata pada bulan sebelumnya. Komponen utama yang menyumbang kepada penurunan ialah Bilangan Unit Kediaman yang Diluluskan Pembinaan (-0.6%), Jangkaan Nilai Jualan di Sektor Pembuatan (-0.4%) dan Bilangan Syarikat Baru Didaftar (-0.3%). Perubahan tahunan IP menurun kepada -0.1% pada November 2012 berbanding 0.3% pada bulan sebelumnya.

Indeks Serentak (IS), yang mengukur aktiviti ekonomi semasa, bertumbuh 1.1% pada November 2012. Komponen utama yang menyumbang kepada

peningkatan ialah Nilai Caruman Benar kepada KWSP (0.5%), Gaji & Upah Benar di Sektor Pembuatan dan Indeks Kuantiti Perdagangan Runcit, masing-masing merekodkan 0.3%. Perubahan tahunan IS pada November 2012 meningkat kepada 2.8% daripada 2.2% pada bulan lepas.

Perubahan tahunan bagi IS menunjukkan peningkatan pada bulan rujukan. Manakala, pergerakan semasa bagi pertumbuhan IP menunjukkan bahawa tiada petanda yang jelas IP akan meningkat secara konsisten dalam bulan yang terdekat. Disokong oleh Indeks Difusi bagi IP yang kekal turun naik sekitar 50.0% sejak Ogos 2012, menandakan bahawa ekonomi Malaysia berkemungkinan akan mengalami pertumbuhan yang perlahan dalam tempoh terdekat.

Highlights

The Leading Index (LI) which monitors the economic performance in advance decreased in November as compared to October 2012. The LI posted a decrease of 1.4% at 110.5 points from 112.1 points in the previous month. The main components that contributed to the decreased were Number of Housing Units Approved (-0.6%), Expected Sales Value in Manufacturing Sector (-0.4%) and Number of New Companies Registered (-0.3%). The annual change of the LI declined to -0.1% in November 2012 as against 0.3% in the preceding month.

The Coincident Index (CI), which measures the current economic activity, grew by 1.1% in November 2012. The main components that

contributed to the increase were Real Contributions to EPF (0.5%), Real Salaries and Wages in Manufacturing Sector and Volume Index of Retail Trade, which respectively recorded 0.3%. The annual change of the CI in November 2012 increased to 2.8% from 2.2% in the last month.

The annual change of the CI showed an improvement in the reference month. Meanwhile, the current movement of the LI showed that there is no clear indication for LI to grow consistently upward in the months ahead. Supported by the level of Diffusion Index for LI which remains fluctuating along 50.0% since August 2012, indicates there is a possibility that the Malaysian economy will grow at a slower pace in the near term.

5.0 KONSEP DAN DEFINISI

5.1 Indeks Komposit

Indeks Komposit merupakan gabungan komponen individu yang digunakan untuk mengukur gelagat kitaran ekonomi. Kebaikan Indeks Komposit berbanding analisis komponen individu ialah ianya dapat mengeluarkan pengaruh ketidakstabilan sesuatu komponen. Pada umumnya, Indeks Komposit lebih berupaya menghasilkan isyarat titik pusing yang jelas dan konsisten berbanding penunjuk secara individu. Terdapat tiga jenis Indeks Komposit dalam Penunjuk Ekonomi Malaysia iaitu indeks pelopor, serentak dan susulan.

i. Indeks Pelopor (IP)

Indeks Pelopor merupakan ukuran jangkaan keseluruhan aktiviti ekonomi untuk masa hadapan. Indeks ini memberitahu kita ke mana arah tuju ekonomi.

ii. Indeks Serentak (IS)

Indeks Serentak merupakan ukuran komprehensif terhadap prestasi keseluruhan ekonomi semasa.

iii. Indeks Susulan (ISL)

Indeks Susulan berfungsi sebagai pengesah kepada isyarat Indeks Pelopor dan Indeks Serentak.

5.2 Indeks Difusi

Indeks Difusi adalah pelengkap kepada Indeks Komposit. Ia digunakan untuk membantu membuat keputusan terutamanya dalam penentuan titik pusing kitaran ekonomi.

Nilai 100 bagi Indeks Difusi menunjukkan semua komponen meningkat dan nilai sifar bermaksud semua komponen mengalami penurunan. Sebagai contoh, nilai Indeks Difusi pada 85 mata bagi IP menunjukkan bahawa 85 peratus komponen IP meningkat pada bulan berkenaan.

NOTA KETERANGAN

5.3 Kitaran Perniagaan

Kitaran perniagaan merujuk kepada turun naik aktiviti ekonomi agregat seperti pengeluaran, pendapatan, guna tenaga, perdagangan dan sebagainya. Terdapat 2 fasa utama kitaran perniagaan iaitu fasa pengembangan dan kemelesetan.

Peningkatan dari titik kawah ke puncak ditakrifkan sebagai fasa pengembangan manakala penurunan dari titik puncak ke kawah ditakrifkan sebagai fasa kemelesetan. Fasa kemelesetan kitaran perniagaan ditentukan oleh kejatuhan Indeks Komposit Serentak sekurang-kurangnya enam bulan secara berturut-turut.

Sebagai contoh, Jadual 1 menunjukkan puncak bagi kitaran kelima Indeks Serentak pada Januari 2008 menandakan bermulanya fasa kemelesetan ekonomi dan kawah pada Mac 2009 menandakan berakhirnya fasa kemelesetan atau bermulanya fasa pengembangan ekonomi.

5.4 Kitaran Pertumbuhan

Kitaran pertumbuhan ialah turun naik aktiviti ekonomi agregat di sepanjang arah aliran jangka panjangnya. Arah aliran jangka panjang aktiviti ekonomi agregat dianggarkan menggunakan kaedah *Hodrick Prescott Filter* terhadap Indeks Serentak. Kitaran pertumbuhan dihasilkan melalui penyisihan indeks daripada arah aliran jangka panjangnya.

Puncak kitaran pertumbuhan bermaksud berakhirnya fasa kenaikan dan bermulanya fasa penurunan pertumbuhan ekonomi. Sementara kawah bagi kitaran pertumbuhan menunjukkan berakhirnya fasa penurunan atau bermulanya fasa kenaikan pertumbuhan ekonomi.

Sebagai contoh, Jadual 2 menunjukkan titik puncak bagi kitaran kesembilan pada bulan April 2004 menandakan bahawa ekonomi telah memasuki fasa pertumbuhan perlahan dan kawah bagi kitaran pertumbuhan pada November 2005 menunjukkan bermulanya fasa pertumbuhan tinggi.

6.0 KEKANGAN PENUNJUK EKONOMI MALAYSIA

Terdapat beberapa kekangan Penunjuk Ekonomi Malaysia yang perlu diambil perhatian oleh pengguna:

- i. Indeks Pelopor tidak dapat mengukur atau meramal perubahan magnitud dalam aktiviti ekonomi. Indeks ini hanya menunjukkan arah tuju ekonomi di masa hadapan.
- ii. Indeks Serentak tidak menggambarkan tahap situasi ekonomi semasa. Justeru itu, ia tidak boleh ditafsirkan sebagai aras Keluaran Dalam Negeri Kasar (KDNK) semasa bulanan.
- iii. Sistem penunjuk ekonomi tidak berupaya untuk mengambilkira kejutan pengaruh dalaman atau/dan luaran kepada ekonomi.

4.0 METHODOLOGY

- 4.1 *Selection of each component for the Composite Index is based on the guideline in the Business Cycle Indicators Handbook¹ namely:*
 - i. **Conformity to business cycle**
The selected data series must conform to the business cycle.
 - ii. **Consistent timing**
The data series must exhibit a consistent timing pattern over time as leading, coincident or lagging indexes.
 - iii. **Economic significance**
The selected data series must significantly contribute to the economy.
 - iv. **Statistical adequacy**
Data must be collected and processed in a statistically reliable manner.
 - v. **Smoothness**
The month to month movements of the data series must not be too erratic.
 - vi. **Promptness**
The selected components must be timely, accurate and updated to contribute to the current analysis.

5.0 CONCEPTS AND DEFINITIONS

5.1 Composite Index

The Composite Index is the combination of individual indicators which measures the economic cycles behaviour. The advantage of Composite Index compared to individual analysis is the tendency to smooth out some of the volatility of the series. The Composite Index is generally more reliable in generating clear and consistent turning points than individual indicators. There are three types of Composite Index in the Malaysian Economic Indicators, i.e. leading, coincident and lagging indexes.

i. Leading Index (LI)

The Leading Index measures anticipations of the overall economic activity in the months ahead. The index tells us where the economy is going.

ii. Coincident Index (CI)

The Coincident Index is a comprehensive measure of the overall current economic performance.

iii. Lagging Index (LG)

The Lagging Index is to validate the signal of the Leading and Coincident Indexes.

5.2 Diffusion Index

The Diffusion Index is a complement to the Composite Index. It is used to assist in making a decision especially in determining turning point of economic cycle.

The value of 100 for Diffusion Index implies that all components are increasing and the value of zero shows that all components are decreasing. For example, the Diffusion Index of 85 points for the LI shows that 85 per cent of LI components are increasing for that particular month.

EXPLANATORY NOTES

5.3 Business Cycle

Business cycle is a fluctuation of the aggregated economic activity such as production, income, employment, trade and etc. There are two main phases of business cycle namely expansion and recession phases.

The upward movement from trough to peak is defined as expansion phase meanwhile the downward movement from peak to trough is classified as recession phase. The phase of business cycle recession is determined by declining of the Coincident Composite Index for at least six months successively.

For example, Table 1 shows that the peak of the fifth cycle of Coincident Index in January 2008 indicates the beginning of business cycle recession and the trough in March 2009 indicates the end of recession phase or the beginning of economic expansion phase.

Table 1: Malaysian Business Cycles Reference Periods

Number	Reference Cycles			Cycles (month)		
	Trough	Peak	Trough	Expansion	Contraction	Full Cycle
First Cycle	-	Jul-74	Feb-75	-	7	-

Third Cycle	Jan-86	Dec-97	Nov-98	143	11	154

Fifth Cycle	Feb-02	Jan-08	Mar-09	71	14	85
Average				90	11	101

5.4 Growth Cycle

The growth cycle is a fluctuation of the aggregated economic activity along its long term trend. The long term trend of the aggregated economic activity is estimated using the Hodrick Prescott Filter method on the Coincident Index. The growth cycle is generated through the deviation of the index from its long term trend.

The peak of growth cycle reflects the end of the upswing and the beginning of downswing phase of economic growth. Meanwhile trough for growth cycle indicates the end of downswing or the beginning of upswing phase of economic growth.

For example, Table 2 shows that the peak point of the ninth cycle in April 2004 reflects that economy is entering the slow growth phase and the trough for growth cycle in November 2005 shows the beginning of a higher growth phase.

6.0 LIMITATION OF MALAYSIAN ECONOMIC INDICATORS

There are some limitations of the Malaysian Economic Indicators that users should be aware of:

- i. The Leading Index is unable to measure or predict the magnitude of any changes of economic activity. The index shows the direction of the economy in advance.
- ii. The Coincident Index does not represent the level of the current economic situation. Thus it should not be interpreted as the level of current monthly Gross Domestic Product (GDP).
- iii. The economic indicators unable to take into account the internal or/and external shock to the economy.
